Grade 4 Math – Mid-Term Revision Sheet

Math · Knowledge City Schools · Answer key ✅

I. Place value & number forms

💡 Place value = the position of the digit (ones, tens, hundreds, thousands…). Value = the digit × its place (the 8 in 5,621,834 is in the hundreds place, so its value is 800).

1. The place value of the digit 8 in the number 5,621,834 is …

A tens
B hundreds ✓
C thousands
D hundred thousand

Why: Counting from the right: 4 ones, 3 tens, 8 hundreds.

2. The place value of the digit 1 in the number 5,162,834 is …

A tens
B hundreds
C thousands
D hundred thousand ✓

Why: 5,162,834 → 5 millions, 1 hundred thousand, 6 ten thousands…

3. What is the place value of the 3 in 73,429?

A Hundred Thousands
B Ten Thousands
C Thousands ✓
D Hundreds

Why: 73,429 → 7 ten thousands, 3 thousands, 4 hundreds, 2 tens, 9 ones.

4. What is the value of the 9 in 4,923,547?

A 9
B 90,000
C 900,000 ✓
D 9,000,000

Why: The 9 is in the hundred thousands place: 9 × 100,000 = 900,000.

5. What is the value of 7 in the number 638,972?

A 7
B 70 ✓
C 700
D 7000

Why: The 7 is in the tens place: 7 × 10 = 70.

6. The number 8,200,407 in expanded form = …

A 80,000,000 + 2,000,000 + 400 + 70
B 8,000,000 + 2,000 + 400 + 7
C 8,000,000 + 200,000 + 400 + 7 ✓
D 8,000,000 + 200,000 + 400 + 70

Why: 8 millions + 2 hundred thousands + 4 hundreds + 7 ones.

7. 6 million + 2 hundred thousand + 5 ten thousands + 9 hundred =

A 6,250,900 ✓
B 6259
C 625,900
D 620,050,900

Why: 6,000,000 + 200,000 + 50,000 + 900 = 6,250,900.

8. **300,000 + 50,000 + 9,000 + 70 + 1 =**

A 350,971
B 35971
C 359,071 ✓
D 359,710

Why: Write each value in its place: 3 5 9 , 0 7 1 (no hundreds → 0).

9. **One million, two hundred seventy thousand, six hundred thirty-three =**

A 1,276,330
B 1,270,633 ✓
C 127,633
D 1,027,633

Why: 1 million | 270 thousand | 633 → 1,270,633.

10. **Eighty million, four hundred twenty-four thousand, nineteen =**

A 80,424,090
B 84,219
C 8,042,419
D 80,424,019 ✓

Why: 80 million | 424 thousand | 019 → 80,424,019.

11. **The number 6,100,907 in expanded form = ...**

A 60,000,000 + 1,000,000 + 900 + 70
B 6,000,000 + 1,000 + 900 + 7
C 6,000,000 + 100,000 + 900 + 7 ✓
D 6,000,000 + 100,000 + 900 + 70

Why: 6 millions + 1 hundred thousand + 9 hundreds + 7 ones.

12. **The standard form of 6,000,000 + 20,000 + 300 + 70 + 8 is ...**

A 60,002,378
B 62,378
C 602,378
D 6,020,378 ✓

Why: 6 millions, 0 hundred thousands, 2 ten thousands, 0 thousands, 378 → 6,020,378.

13. **The standard form of 60,000,000 + 2,000 + 300 + 70 + 8 is ...**

A 60,002,378 ✓
B 62,378
C 602,378
D 6,020,378

Why: 60 millions, then 2 thousands and 378 → 60,002,378.

14. **The value of the digit 8 in the number 9,080,134 is ...**

A 80
B 8000
C 80,000 ✓
D 8

Why: The 8 is in the ten thousands place: 8 × 10,000 = 80,000.

15. **The value of the digit 9 in the number 9,080,134 is ...**

A 90
B 9,000,000 ✓
C 90,000
D 9

Why: The 9 is in the millions place: 9,000,000.

16. **506,000 = ... thousands**

- **A** **506** ✓
- **B** 5,060
- **C** 50,600
- **D** 6

Why: 506,000 ÷ 1,000 = 506 thousands.

17. **26,000 = ... hundreds**

- **A** 26
- **B** **260** ✓
- **C** 2,600
- **D** 26,000

Why: 26,000 ÷ 100 = 260 hundreds.

I. Compare, round, add & subtract

💡 Compare digits from the left. Rounding: look at the digit to the right of the rounding place; 5 or more → round up, 4 or less → round down.

18. **746,239 ..... 749,052**

- **A** **<** ✓
- **B** >
- **C** =
- **D** none of them

Why: Same hundred thousands and ten thousands; thousands: 6 < 9, so 746,239 < 749,052.

19. **156,239 ..... 149,052**

- **A** <
- **B** **>** ✓
- **C** =
- **D** none of them

Why: Ten thousands: 5 > 4, so 156,239 > 149,052.

20. **What is 749,012 rounded to the nearest 100,000?**

- **A** 750,000
- **B** 800,000
- **C** **700,000** ✓
- **D** 749,012

Why: The ten-thousands digit is 4 (less than 5) → round down to 700,000.

21. **What is 749,012 rounded to the nearest million?**

- **A** 749,012
- **B** **1,000,000** ✓
- **C** 700,000
- **D** 0

Why: The hundred-thousands digit is 7 (5 or more) → round up to 1,000,000.

22. **What is 129,057 rounded to the nearest ten thousand?**

- **A** 120,000
- **B** **130,000** ✓
- **C** 129,000
- **D** 129,060

Why: The thousands digit is 9 → round up: 130,000.

23. What is 749,012 rounded to the nearest 10,000?

A 750,000 ✓ B 800,000
C 700,000 D 749,012

Why: The thousands digit is 9 → round up: 750,000.

24. 82,124 – 99 =

A 82,025 ✓ B 82,000
C 72,124 D 99

Why: 82,124 – 100 = 82,024, then add 1 back → 82,025.

25. 99,124 – 99 =

A 98,025 B 124
C 98,124 **D 99,025 ✓**

Why: 99,124 – 100 = 99,024, then + 1 → 99,025.

26. The sum of 8,024 + 999 =

A 8,024,999 B 8,923
C 9,023 ✓ D 9,024

Why: 8,024 + 1,000 = 9,024, then – 1 → 9,023.

27. The sum of 6,024 + 999 =

A 6,024,999 B 6,923
C 7,023 ✓ D 7,024

Why: 6,024 + 1,000 = 7,024, then – 1 → 7,023.

28. Estimate the difference 948 – 297 to the nearest hundred =

A 680 B 700
C 800 **D 600 ✓**

Why: 948 ≈ 900 and 297 ≈ 300 → 900 – 300 = 600.

29. Estimate the difference 978 – 297 to the nearest hundred =

A 680 **B 700 ✓**
C 800 D 600

Why: 978 ≈ 1,000 and 297 ≈ 300 → 1,000 – 300 = 700.

30. Estimate the sum 998 + 297 to the nearest ten =

A 1,300 ✓ B 900
C 1,000 D 300

Why: 998 ≈ 1,000 and 297 ≈ 300 → 1,000 + 300 = 1,300.

I. Factors, primes & patterns

💡 A prime number has exactly two factors (1 and itself). A composite number has more than two factors. A pattern follows a rule; each item is a term.

31. Which list contains all prime numbers?

A 1, 2, 3, 5
B 2, 5, 13, 39
C 2, 3, 5, 7 ✓
D 2, 5, 13, 66

Why: 1 is not prime; 39 = 3 × 13 and 66 are composite. 2, 3, 5, 7 are all prime.

32. Which factor of 24 is missing? 1, 2, 3, 4, 6, ..., 12, 24

A 7
B 8 ✓
C 9
D 10

Why: 24 ÷ 8 = 3, so 8 is a factor of 24.

33. Which multiple of 6 is missing? 6, 12, ..., 24, 30

A 4
B 16
C 14
D 18 ✓

Why: Count by 6: 6, 12, 18, 24, 30.

34. A ..... is a number that has more than two factors.

A composite number ✓
B prime number
C pattern
D multiple

35. A ..... is a number that has two factors only: 1 and itself.

A composite number
B prime number ✓
C pattern
D multiple

36. A ..... is a list of figures, symbols, or numbers that follow a certain rule.

A composite number
B prime number
C pattern ✓
D multiple

37. Each number in a numerical pattern is a .....

A term ✓
B sequence
C pattern
D multiple

38. A ..... is the ordered arrangement of the terms that make a pattern.

A term
B sequence ✓
C pattern
D multiple

39. **The next figure in the pattern: ▽ □ ○ ▽ □ ○ ▽ .....**

A ○ circle
B □ **square** ✓
C △ triangle
D ▷ triangle

Why: The rule repeats ▽ □ ○; after ▽ comes □.

40. **The next figure in the pattern: □ □ △ □ □ .....**

A ○ circle
B □ square
C **△ triangle** ✓
D ▷ triangle

Why: The rule repeats □ □ △; after □ □ comes △.

41. **The next figure in the pattern: △ ○ □ △ ○ □ △ .....**

A **○ circle** ✓
B □ square
C △ triangle
D ▭ rectangle

Why: The rule repeats △ ○ □; after △ comes ○.

II. Compare with >, < or =

💡 First compare the number of digits, then compare digit by digit from the left.

42. **993,249 ..... 1,003,225**

A **<** ✓
B >
C =

Why: 1,003,225 has 7 digits, 993,249 has 6.

43. **562,501 ..... 526,105**

A <
B **>** ✓
C =

Why: Ten thousands: 6 > 2.

44. **671 thousand 671,000**

A <
B >
C **=** ✓

Why: 671 thousand = 671,000.

45. **753,249 ..... 1,753,249**

A **<** ✓
B >
C =

Why: 1,753,249 has more digits.

46. 562,501 256,105

A <
B > ✓
C =

Why: Hundred thousands: 5 > 2.

47. 518 hundred 518,000

A < ✓
B >
C =

Why: 518 hundred = 51,800, which is less than 518,000.

48. 3 million, 18 thousand ..... 2 million, 999 thousand, 514

A <
B > ✓
C =

Why: 3,018,000 > 2,999,514 (3 million is more than 2 million).

49. 1,572,430 157,243

A <
B > ✓
C =

Why: 1,572,430 has 7 digits, 157,243 has 6.

50. 4,390,208 4,390,028

A <
B > ✓
C =

Why: Hundreds: 2 > 0.

51. 529,321 946,521

A < ✓
B >
C =

Why: Hundred thousands: 5 < 9.

52. 274,539 274,509

A <
B > ✓
C =

Why: Tens: 3 > 0.

53. 8,534,251 8,257,314

A <
B > ✓
C =

Why: Hundred thousands: 5 > 2.

54. 370 tens ..... 37 thousands

A < ✓ **B** >

C =

Why: 370 tens = 3,700; 37 thousands = 37,000.

III & IV. Add and subtract

💡 Line up the digits by place value and work from the ones column; regroup when needed.

55. 56,349 + 32,065 =

A **88,414** ✓ **B** 88,304

C 88,404 **D** 89,414

Why: 9+5=14 (write 4, carry 1), 4+6+1=11, 3+0+1=4, 6+2=8, 5+3=8 → 88,414.

56. 708,324 + 351,742 =

A **1,060,066** ✓ **B** 1,059,066

C 1,060,166 **D** 959,066

Why: 324+742=1,066 and 708,000+351,000=1,059,000 → 1,060,066.

57. 1,708,324 + 351,742 =

A **2,060,066** ✓ **B** 2,059,066

C 1,060,066 **D** 2,160,066

Why: Same as above plus 1,000,000 → 2,060,066.

58. 48,249 − 22,066 =

A **26,183** ✓ **B** 26,283

C 26,173 **D** 25,183

Why: 9−6=3, 4−6 needs regrouping: 14−6=8, 1−0=1, 8−2=6, 4−2=2 → 26,183.

59. 879,775 − 371,641 =

A **508,134** ✓ **B** 508,234

C 507,134 **D** 508,144

Why: Subtract column by column: 5−1=4, 7−4=3, 7−6=1, 9−1=8, 7−7=0, 8−3=5 → 508,134.

60. 830,569 − 37,062 =

A **793,507** ✓ **B** 793,407

C 803,507 **D** 793,517

Why: 830,569 − 37,062: regroup in the ten thousands → 793,507.

V. Order numbers

💡 Least to greatest = smallest first. Compare the number of digits first, then the leftmost digits.

61. Order from LEAST to greatest: 3,804,127 · 308,412 · 3,048,159 · 3,408,159

- **A** **308,412 · 3,048,159 · 3,408,159 · 3,804,127** ✓
- **B** 3,048,159 · 308,412 · 3,408,159 · 3,804,127
- **C** 308,412 · 3,408,159 · 3,048,159 · 3,804,127
- **D** 3,804,127 · 3,408,159 · 3,048,159 · 308,412

Why: 308,412 has only 6 digits (smallest); then compare hundred thousands: 0 < 4 < 8.

62. Order from LEAST to greatest: 804,007 · 3,000,090 · 3,000,009 · 308,700

- **A** **308,700 · 804,007 · 3,000,009 · 3,000,090** ✓
- **B** 804,007 · 308,700 · 3,000,009 · 3,000,090
- **C** 308,700 · 804,007 · 3,000,090 · 3,000,009
- **D** 3,000,009 · 3,000,090 · 308,700 · 804,007

Why: 6-digit numbers first (308,700 < 804,007); then 3,000,009 < 3,000,090 (tens: 0 < 9).

63. Order from GREATEST to least: 577,859 · 567,895 · 577,589 · 1,567,985

- **A** **1,567,985 · 577,859 · 577,589 · 567,895** ✓
- **B** 1,567,985 · 577,589 · 577,859 · 567,895
- **C** 577,859 · 1,567,985 · 577,589 · 567,895
- **D** 1,567,985 · 567,895 · 577,859 · 577,589

Why: 7-digit number is greatest; then 577,859 > 577,589 (hundreds: 8 > 5) > 567,895.

64. Order from GREATEST to least: 5,084,127 · 508,412 · 5,840,159 · 5,408,159

- **A** **5,840,159 · 5,408,159 · 5,084,127 · 508,412** ✓
- **B** 5,840,159 · 5,084,127 · 5,408,159 · 508,412
- **C** 5,408,159 · 5,840,159 · 5,084,127 · 508,412
- **D** 508,412 · 5,084,127 · 5,408,159 · 5,840,159

Why: Compare hundred thousands: 8 > 4 > 0; the 6-digit number is last.

VI. Problem solving

💡 Read the question twice: 'in all' or 'how many now' → add; 'how many more' → subtract.

65. Aaron's telephone number is 7345981. Write it in word form.

- **A** **seven million, three hundred forty-five thousand, nine hundred eighty-one** ✓
- **B** seventy-three million, forty-five thousand, nine hundred eighty-one
- **C** seven hundred thirty-four thousand, five hundred ninety-eight
- **D** seven million, three hundred forty-five, nine hundred eighty-one

Why: 7,345,981 → 7 million | 345 thousand | 981.

66. **Adam drove 38,497 miles this year and 21,503 miles last year. How many miles did Adam drive in all?**

A 60,000 ✓ B 59,000
C 16,994 D 60,100

Why: 'In all' → add: 38,497 + 21,503 = 60,000.

67. **Walid drove 789 miles one day and 246 miles the day after. How many MORE miles did Walid drive on the first day?**

A 1,035 **B 543 ✓**
C 453 D 553

Why: 'How many more' → subtract: 789 − 246 = 543.

68. **Leo had 2,164 stamps. His friend Casey gave him 3,754 stamps. How many stamps does Leo have now?**

A 5,918 ✓ B 1,590
C 5,818 D 5,928

Why: 'Have now' after receiving → add: 2,164 + 3,754 = 5,918.
