Grade 6 Science – Mid-Term Worksheet

Science · Sara Elewa · Knowledge City Schools · Name: _____ Date: _____

Q1: Scientific terms

1. **Write the scientific term: A huge ball of burning gases that releases energy.**
   - A Desublimation
   - B Planet
   - C Star
   - D Evaporation

2. **Write the scientific term: The system that consists of the sun and the planets.**
   - A Astronomical unit
   - B Freezing
   - C Moon
   - D Solar system

3. **Write the scientific term: A large round body of rocks or gases that moves around the sun.**
   - A Desublimation
   - B Chemical bond
   - C Planet
   - D Moon

4. **Write the scientific term: A unit used to measure the distances outside the solar system.**
   - A Moon
   - B Planet
   - C Evaporation
   - D Light year

5. **Write the scientific term: A unit used to measure the distance inside the solar system.**
   - A Evaporation
   - B Compound
   - C Astronomical unit
   - D Solar system

6. **Write the scientific term: A molecule with more than one type of atoms.**
   - A Solar system
   - B Melting
   - C Condensation
   - D Compound

7. **Write the scientific term: A solid material with atoms that are arranged in a certain shape.**
   - A Desublimation
   - B Evaporation
   - C Planet
   - D Crystal

8. **Write the scientific term: An attraction between atoms or molecules.**
   - A Chemical bond
   - B Solar system
   - C Light year
   - D Evaporation

9. **Write the scientific term: Changing of matter from the solid state to the liquid state.**
   - A Melting
   - B Solar system
   - C Desublimation
   - D Moon

10. Write the scientific term: Changing of matter from the solid state to the gas state.

A Astronomical unit
B Planet
C Sublimation
D Moon

11. Write the scientific term: Changing of matter from the liquid state to the solid state.

A Freezing
B Astronomical unit
C Moon
D Crystal

12. Write the scientific term: Changing of matter from the liquid state to the gas state.

A Desublimation
B Evaporation
C Chemical bond
D Freezing

13. Write the scientific term: Changing of matter from the gas state to the liquid state.

A Condensation
B Freezing
C Desublimation
D Chemical bond

14. Write the scientific term: Changing of matter from the gas state to the solid state.

A Light year
B Evaporation
C Star
D Desublimation

Q2: Choose the correct answer

15. The solar system formed from a large cloud of gas and dust called a _____.

A galaxy
B nebula
C comet
D crater

16. According to the nebular hypothesis, why did the material begin to gather together?

A Gravity
B Sound
C Electricity from Earth
D Ocean currents

17. Which material was more likely to remain solid close to the young Sun?

A Rock and metal
B Ice only
C Water vapor only
D Hydrogen only

18. What is an asteroid?

A A large star
B A rocky object orbiting the Sun
C A moon of Earth
D A cloud of gas

19. Which unit is most appropriate for measuring the distance between planets?

A Millimeter
B Astronomical unit
C Gram
D Celsius

20. What causes day and night on Earth?

A Earth's rotation
B Earth's revolution
C The Moon's rotation
D Moon revolution

21. Which Earth layer is the thinnest, solid outer layer of Earth?

A Outer core
B Mantle
C Crust
D Inner core only

22. Which of these is a natural resource?

A wood from a tree
B nylon rope
C plastic bottle
D synthetic rubber

23. Which material is usually synthetic?

A cotton
B wool
C polyester
D stone

24. Which is a renewable resource?

A coal
B sunlight
C petroleum
D natural gas

25. The amount of mass in a given volume is called:

A volume
B conductivity
C density
D flexibility

26. Sugar dissolving in water demonstrates:

A solubility
B magnetism
C hardness
D texture

27. Which material is a good electrical conductor?

A rubber
B dry wood
C copper
D plastic

28. All matter is made of tiny particles called:

A cells only
B particles such as atoms and molecules
C light rays
D sound waves

29. An atom is:

A a tiny building block of matter
B a type of energy
C a liquid
D a mixture of substances

30. A molecule forms when:

A materials disappear
B two or more atoms bond together
C a solid melts
D a liquid freezes

31. In a pure substance, particles are:

A always different kinds mixed randomly
B the same type of particle
C not moving at all
D only found in gases

32. Which state has a definite shape and a definite volume?

A solid
B liquid
C gas
D all fluids

33. A liquid:

A has a fixed shape
B takes the shape of its container
C cannot flow
D has no volume

34. Gas particles are generally:

A packed tightly in fixed positions
B close together and sliding past one another
C far apart and moving freely
D not moving

35. The change from a solid to a liquid is called:

A freezing
B condensation
C melting
D evaporation

36. The change from a solid to a gas is called:

A condensation
B melting
C sublimation
D freezing

Q3: Short answers

37. Why can Earth support life better than most other planets?

A It contains oxygen in its atmosphere and freshwater
B It is the biggest planet
C It is the closest planet to the Sun
D It has the most moons

38. What is rotation?

A Spinning of an object around its axis
B An object moving around another object
C Melting of ice
D The pull of gravity

39. What is revolution?

A Spinning of an object around its axis
B An object moving around another object
C A change of state
D A type of rock

40. Which pair lists two renewable resources?

A Sunlight and wind
B Coal and oil
C Natural gas and coal
D Oil and natural gas

41. Which pair lists two non-renewable resources?

A Sunlight and water
B Wind and sunlight
C Natural gas and coal
D Water and wind

42. Which pair lists two natural materials?

A plastic and steel
B wood and copper
C paper and plastic
D steel and paper

43. Which pair lists two synthetic materials?

A wood and gold
B copper and wood
C plastic and steel
D gold and copper

44. What is mass?

A The amount of matter in an object
B The amount of space an object takes up
C The weight of water
D The speed of an object

45. What is volume?

A The amount of matter in an object
B The amount of space taken by matter
C The temperature of an object
D The hardness of an object

46. A block has a mass of 60 g and a volume of 20 cm^3. What is its density?

A 3 g/cm^3
B 40 g/cm^3
C 80 g/cm^3
D 1200 g/cm^3

47. Why are metals used for cooking pans, while plastic or wood are used for handles?

A Metals conduct heat; plastic and wood do not
B Metals are lighter than wood
C Plastic melts faster than metal
D Wood conducts heat better than metal

Q4: Match the term

48. A special quality or characteristic of something:

A Atom
B Flammability
C Property
D Pure substance

49. Matter that always has the same composition:

A Atom
B Flammability
C Property
D Pure substance

50. The basic unit of any matter:

A Atom
B Flammability
C Property
D Pure substance

51. The ability of a type of matter to burn easily:

A Atom
B Flammability
C Property
D Pure substance

Q5: Complete

52. Water is a _____ molecule because it has positive and negative sides.

A Chemical formula
B Gas
C Surface tension
D Polar

53. An insect can walk on a pond because of the _____ of water.

A Gas
B Surface tension
C Compound
D Liquid

54. A diamond and graphite are from the same element, that is _____.

A Element
B Gas
C Liquid
D Carbon

55. H_2O is a _____ for water.

A Solid
B Liquid
C Gas
D Chemical formula

56. Oxygen is an _____ found in compound insulin.

A Chemical formula
B Polar
C Element
D Gas

57. **Oxygen is an element found in _____ insulin.**

A Carbon **B** Solid

C Compound **D** Element

58. **The substance that has fixed volume and takes the shape of a container is a _____.**

A Liquid **B** Solid

C Carbon **D** Element

59. **The substance that has a fixed shape and volume is a _____.**

A Polar **B** Atom

C Solid **D** Surface tension

60. **The substance that doesn't have a fixed shape or volume is a _____.**

A Gas **B** Solid

C Polar **D** Surface tension

Q6: Physical or chemical property?

61. **Sodium has a silvery-white color. This is a...**

A Physical property **B** Chemical property

62. **Sodium is easy to cut with a knife. This is a...**

A Physical property **B** Chemical property

63. **Sodium is solid at room temperature. This is a...**

A Physical property **B** Chemical property

64. **Sodium burns with an orange flame. This is a...**

A Physical property **B** Chemical property

65. **Sodium becomes coated with a white substance when exposed to air. This is a...**

A Physical property **B** Chemical property

Q7: Chemical formulas

66. **Chemical formula of water:**

A H_2O **B** CO_2

C NH_3 **D** CH_4

67. Number of atoms in a water molecule (H_2O):

A 2 B 3
C 4 D 5

68. Chemical formula of ammonia:

A H_2O B NH_3
C CO_2 D CH_4

69. Number of atoms in an ammonia molecule (NH_3):

A 3 B 4
C 5 D 2

70. Chemical formula of carbon dioxide:

A CO B CO_2
C C_2O D CH_4

71. Number of atoms in a carbon dioxide molecule (CO_2):

A 2 B 3
C 4 D 5

72. Chemical formula of methane:

A CH_4 B NH_3
C CO_2 D H_2O

73. Number of atoms in a methane molecule (CH_4):

A 3 B 4
C 5 D 6
